

# ZeroLock<sup>®</sup> Compliance Overview for NIST 800-171

Designed to align with NIST 800-171, ZeroLock<sup>®</sup> delivers a comprehensive, multilayered defense strategy tailored for securing hypervisors against evolving threats. By integrating advanced access controls, AI-driven behavioral detection, and automated threat response into the hypervisor layer, ZeroLock proactively prevents unauthorized access, detects malicious activity, and enforces compliance with federal security standards.

| Function  | Control  | Applicable Features   |
|---|--|---|
| <b>Access Control &amp; Authentication</b>                  | <ul style="list-style-type: none"><li>3.1.1 - Account Management</li><li>3.1.5 - Least Privilege</li><li>3.1.12 - Remote Access</li><li>3.5.1 - User Identification and Authentication</li><li>3.5.3 - Multi-Factor Authentication</li></ul> | <ul style="list-style-type: none"><li>• Network Access Rules</li><li>• File Access Rules</li><li>• SSH MFA</li></ul>  |
| <b>Configuration Management</b>                             | <ul style="list-style-type: none"><li>3.4.2 - Configuration Settings</li><li>3.4.6 - Least Functionality</li><li>3.4.8 - Authorized Software - Allow by Exception</li></ul>  | <ul style="list-style-type: none"><li>• Application Allowlisting</li><li>• Automated File Rollback</li><li>• Program Execution Rules</li><li>• Program Filter</li></ul>   |
| <b>System Integrity, Protection &amp; Threat Monitoring</b> | <ul style="list-style-type: none"><li>3.13.1 - Boundary Protection</li><li>3.13.11 - Cryptographic Protection</li><li>3.13.15 - Session Authenticity</li><li>3.14.2 - Malicious Code Protection</li><li>3.14.6 - System Monitoring</li></ul> | <ul style="list-style-type: none"><li>• Endpoint Quarantine</li><li>• Ransomware Detection</li><li>• Tampering Detection</li><li>• Cryptojacking Detection</li><li>• Use of Cryptography</li><li>• Canary Files</li></ul> |
| <b>Incident Response</b>                                    | <ul style="list-style-type: none"><li>3.6.1 - Incident Handling</li></ul>  | <ul style="list-style-type: none"><li>• Remote Shell</li></ul>  |

## ZeroLock Endpoint Agent Requirements for Hypervisors

|                             |  |
|-----------------------------|--|
| <b>OS</b>                   | <ul style="list-style-type: none"><li>• ESXi, 6.7+ (Older versions supported upon request.)</li><li>• Nutanix, AHV-2017+</li><li>• XenServer, 6.5+</li><li>• Citrix Hypervisor, 8.0+</li><li>• Proxmox, 3.0+</li><li>• Red Hat Enterprise Virtualization (RHEV), 3.6+</li><li>• KVM, Kernel 3.5+</li></ul> |
| <b>Processor</b>            | x86-64, ARM-64 (coming soon)   |
| <b>Memory</b>               | 50MB   |
| <b>Disk Space</b>           | 100MB  |
| <b>Kernel Mods</b>          | No kernel modification or modules required   |
| <b>Installation Methods</b> | <ul style="list-style-type: none"><li>• One-line, web-based deployment (Wget)</li><li>• File-based deployment (Tar.gz or Bash)</li><li>• ESXi: Signed VIB and deployable via vCenter</li></ul>   |

## ZeroLock Server Requirements (Only required for on-prem deployment.)

|                           |   |
|---------------------------|---|
| <b>RAM</b>                | 16GB  |
| <b>Disk Space</b>         | 512GB (Dependent on number of endpoints and data retention period.)   |
| <b>CPU Cores</b>          | 6 or more recommended   |
| <b>Installation Reqs.</b> | <ul style="list-style-type: none"><li>• Self-deployment: Latest version of Docker installed</li><li>• OVA-deployment: ESXi 7.0 or later</li></ul> |

## ZeroLock Bidirectional API-First Architecture

|                              |  |
|------------------------------|--|
| <b>Documentation</b>         | Visit <a href="https://api.zerolock.com">api.zerolock.com</a> for a full API   |
| <b>Existing Integrations</b> | <ul style="list-style-type: none"><li>• SIEM: Splunk, Sumo Logic, Elastic</li><li>• SOAR: Swimlane</li><li>• Incident API: Veeam</li></ul> |

## About Vali Cyber®

Vali Cyber, Inc. was founded in 2020 with the mission of addressing the specific security needs of Linux and its derivatives. By focusing on creating a Linux-first security solution with increased efficacy and reduced Total Cost of Ownership (TCO), we created the ZeroLock platform. Our approach puts clients in control of their hypervisor & Linux security by reducing analyst and computational overhead, while simultaneously ensuring uptime with state-of-the-art AI behavioral techniques to stop attacks and automated file rollback to restore your most critical data in milliseconds. Imagine detecting and fully remediating a ransomware attack on your hypervisor in real-time...that dream has become reality.
